

Com4IP-BCS (Business Community Services) Secure Personal Workgroup

The **Com4IP-BCS solution** is intended for the ISP (Internet Service Providers) as well as for organizations wishing to connect their customers, providers, partners, suppliers and other business-related party under a secure environment of real time communication. This business community allows clients to create a synergy of real time communication between the various interveners. With this real time communication function, organizations are equipped with a leading competitive advantage with regard to their competitors.

The users can be connected with the business community offered by their organization or ISP via a computer and by mobile tools (PDA-Personal, cellular phone and laptop) via the Internet network. All the **Com4IP client** and **Com4IP-Mobile** are connected via the Internet network and this, with real time communication for presences, profiles management according to the presence's status and contacts management, calendar management and E-mail management. Here are the **Com4IP-BCS product** components:
